

NEVADA STATE OPIOID RESPONSE

Integrated Opioid Treatment and Recovery Centers | Prevention & Treatment Activities | Controlled Substance Prevention

Meet the IOTRCs

The Life Change Center (TLCC): TLCC is a non-profit organization that has been providing recovery services for heroin and prescription medication abuse concerns since 1999. They offer a variety of services to beat their drug addiction. The recovery program of TLCC takes medication assisted treatment one step further and includes specialized counseling in addition to medication and case management.

Center for Behavioral Health (CBH): CBH is a network of outpatient facilities offering comprehensive substance abuse treatment programs to assist people addicted to opiates. Treatment plans are customized to every patient, ensuring that they receive the highest quality treatment available. Patient care is the top priority at CBH, and they work hard to ensure that each client receives the highest level of care and respect.

Vitality Unlimited: The mission of Vitality Unlimited is to improve the health and welfare of society by reducing the number of individuals dependent on alcohol and other drugs by providing services related to substance abuse treatment, behavioral health services, affordable housing, and programs designed to meet the specific needs of veterans.

Nevada's Response to the Opioid Crisis: Creating Hubs and Spokes

Individuals with an opioid use disorder (OUD) often have complex treatment needs that require concurrent and coordinated attention to addiction, medical, psychiatric, and social problems. OUD patients do best when they have access to a full range of medication assisted treatment (MAT) options in a variety of settings, and they can also benefit from assistance in locating and navigating an array of social and recovery support services. In April 2017, Nevada was awarded a State Targeted Response to the Opioid Crisis Grant to address the opioid crisis by increasing access to treatment, reducing unmet treatment need, and reducing opioid overdose related deaths through the provision of prevention, treatment and recovery activities for opioid use disorder (OUD) (including both prescription opioids and illicit drugs such as heroin).
